- Ratings are calculated to comply with EN13000, ISO 4305 and include factors based on a 4 degree tipping angle.
- Operating radius is the horizontal distance from centerline of rotation to a vertical line through the center of gravity of the load.
- The weight of hook block, slings and all other load handling accessories shall be considered part of the lifted load.

Ratings shown are based on freely suspended loads and make no allowance for such factors as wind effect on lifted load, ground conditions, out-of-level, operating speeds or any other condition that could be detrimental to the safe operation of this equipment.

The operator, therefore, has the responsibility to judge the existing conditions and reduce lifted loads and operating speeds accordingly.

- Ratings are for the operation on a firm and level surface, up to 1 % gradient.
  - At radii and boom lengths where no ratings are shown on chart, operation is not intended nor approved.
  - Boom inserts and guy lines must be arranged as shown in the "operator's manual".
  - Boom hoist reeving is 12 parts of line.
  - Gantry must be in raised position for all conditions.
  - Boom backstops are required for all boom lengths.
  - The boom should be erected over the front of the crawlers, not laterally.
- When erecting and lowering the boom at length of 190 ft (57.9 m) with jib, the blocks for erection must be placed at the end of the crawlers.

Ratings inside of boxes  are based on structural competence.

The minimum rated load is 1.4 t.

Crawlers must be fully extended for all crane operations.

Ratings shown are based on allowable wind speed of 9.8 m/s or less.

The wind speed mentioned here means the instantaneous wind speed.

Ratings shown are based on allowable travel speed of 0.1 m/s or less.

## (Crane boom lifting)

- The total load that can be lifted is the value of the weight of main hook block, slings, and all other load handling accessories deducted from crane boom ratings shown.

## (Fixed jib lifting)

- The total load that can be lifted is the value of the weight of jib hook block, slings, and all other load handling accessories deducted from fixed jib ratings shown.
- The availability of fixed jib mounting
  - On crane boom : Range 24.4 m to 51.8 m.

Note:

Ratings according to EN13000.

Ratings shown in   are determined by the strength of the boom or other structural components.

Lifting capacities may vary depending on hook used or with/without auxiliary sheave.

Please refer rated chart in operator's cabin.

- Operating radius is the horizontal distance from centerline of rotation to a vertical line through the center of gravity of the load.
- The weight of bucket, slings and all other load handling accessories shall be considered part of the lifted load.
- Ratings shown are based on freely suspended loads and make no allowance for such factors as wind effect on lifted load, ground conditions, out-of-level, operating speeds or any other condition that could be detrimental to the safe operation of this equipment. The operator, therefore, has the responsibility to judge the existing conditions and reduce lifted loads and operating speeds accordingly.
- Rated loads do not exceed 66 % of minimum tipping loads.
- Ratings are for the operation on a firm and level surface, up to 1 % gradient.
- At radii and boom lengths where no ratings are shown on chart, operation is not intended nor approved.
- Boom inserts and guy lines must be arranged as shown in the "operator's manual".
- Boom hoist reeving is 12 parts of line.
- Gantry must be in raised position for all conditions.
- Boom backstops are required for all boom lengths.
- The boom should be erected over the front of the crawlers, not laterally.
- Crawlers must be fully extended for all crane operations.

## (Clamshell bucket lifting)

- The total load that can be lifted is the value of the weight of bucket, slings, and all other load handling accessories deducted from main boom ratings shown.
- The weight of bucket and materials must not exceed rated load.
- Optimum bucket should be required according to material.  
 $\text{Bucket capacity (m}^3\text{)} \times \text{specified gravity of material (ton/m}^3\text{)} + \text{bucket weight (ton)} = \text{rated load.}$
- Bucket weight must also be decreased according to operating cycle and bucket lowering height.
- Rated loads are determined by stability and boom strength. During simultaneous operations of boom and swing, rapid acceleration or deceleration must be avoided.
- Do not attempt to cast the bucket while swinging or diagonal draw-cutting.

## <Reference Information>

### Main hoist loads

No. of Parts of Line	1
Maximum Loads (kN)	98
Maximum Loads (t)	10.0

### Assembling the counterweight (Standard type)

### Assembling the counterweight (Optional type)

- Although the total weight of the counterweight is different between machine equipped with self-removal device and machine not equipped with self-removal device, the lifting capacity is the same.

Operation of this equipment in excess of rated loads or disregard of instruction voids the warranty.

  - The weight of hook block, slings and all other load handling accessories shall be considered part of the lifted load.
  - Ratings shown are based on freely suspended loads and make no allowance for such factors as wind effect on lifted load, ground conditions, out-of-level, operating speeds or any other condition that could be detrimental to the safe operation of this equipment. The operator, therefore, has the responsibility to judge the existing conditions and reduce lifted loads and operating speeds accordingly.
  - Ratings are for the operation on a firm and level surface, up to 1 % gradient.
  - At radii and boom lengths where no ratings are shown on chart, operation is not intended nor approved.
  - Boom inserts and guy lines must be arranged as shown in the "operator's manual".
  - Boom hoist reeving is 12 parts of line.
  - Gantry must be in raised position for all conditions.
  - Boom backstops are required for all boom lengths.
  - The boom should be erected over the front of the crawlers, not laterally.
  - Ratings inside of boxes ☐ are based on structural competence.
  - The minimum rated load is 1.4 t.
  - Crawlers must be fully extended for all crane operations.
  - Ratings shown are based on allowable wind speed of 9.8 m/s or less.  
The wind speed mentioned here means the instantaneous wind speed.
  - Ratings shown are based on allowable travel speed of 0.1 m/s or less.
- (Crane boom lifting)**
- The total load that can be lifted is the value of the weight of hook block, slings, and all other load handling accessories deducted from main boom ratings shown.

Counterweight	Carbody weight	Boom length

## Assembling the counterweight (Standard type)

## Assembling the counterweight (Optional type)

- Although the total weight of the counterweight is different between machine equipped with self-removal device and machine not equipped with self-removal device, the lifting capacity is the same.
