

KOBELCO

CONSTRUCTION MACHINERY LINE-UP

Complies with the EU Stage V
exhaust emission regulation

We Save You Fuel

Achieving a Low-Carbon Society

Superb, Uniform Quality

Japan's first electric shovel in 1930

In 1930, Kobe Steel manufactured Japan's first domestically produced electric shovel, followed by Japan's first hydraulic excavator in 1963. Since then, the KOBELCO brand has been associated with groundbreaking construction machinery ranging from civil engineering equipment to machines used in recycling operations.

In developing new products, we always start with actual worksites. What do owners

and operators really need in today's market? What are the onsite conditions, and how can we make operations easier, faster, and more efficient? By asking the right questions from the start, we've created an impressive lineup of machines that have won international praise for their excellent performance, fuel efficiency, and whisper-quiet operation.

Around the Globe

We are always prepared to conduct research and development from the customer's perspectives. We create new values by further deepening the ingenious technology we have developed to date as well as effectively using the latest technology such as three- dimensional CAD and structural analysis and basic research.

We have an ideal system tailored to customer needs. Those needs are analyzed at worksites throughout the world, forming the basis for developmental work at Production Division and the Product Development Engineering Division and the new plant, including the invention of efficient production technologies. We then transfer the results to our various production centers throughout the world, making it possible for us to quickly and reliably deliver machines featuring unprecedented fuel efficiency, productivity, durability, and advanced technology to customers around the globe.

Hiroshima Headquarters

Itsukaichi Factory in Hiroshima

PRODUCT BRANDS CONCEPT

PERFORMANCE

Improved power and cycle speed increase work efficiency and productivity.

Perceivable performance

- High-output engine which conforms to the emission regulation STAGE V

Approaches to multi-function and diversity

- 10-inch color monitor (the largest in the industry)
- Attachment mode

Safety

- Right and rear cameras

Ease of maintenance

- iNDR high-density mesh filter which removes dust, allowing the cooling equipment to be maintained
- KOMEXS which totally supports machines through network speed and accuracy

KOBELCO has realised a completely new value by harmonising PERFORMANCE – greater efficiency and productivity with an increased power and speed and DESIGN – operator-based operability and comfort, refusing to accept any compromises. In pursuit of unique and matchless machines which are unforgettable once you use them, KOBELCO will continue to rise to meet every challenge.

DESIGN

Our pursuit of operability and comfort primarily for operators created the beauty of simplicity.

Design contributing to comfort

- Comfortable and cozy cab

Design contributing to operability

- Jog dial that allows simple operations
- LED backlights

Interior and exterior designs

- Solid & Advanced exterior design
- High-Grade & Advanced interior design

(Compared to Eco-mode on SK500LC-10)

SK530LC (MVLC)

Crawler width can be adjusted by fixing bolt positions to comply with transport regulations.

*MVLC is standard equipment for SK530LC.

Independent Travel

Selecting Independent Travel dedicates one hydraulic pump to travel and one to the attachment on a continuous basis, allowing for a smooth and constant movement speed even while swinging or using the boom or attachment. With Independent Travel, safely carrying a large pipe across a job site is a breeze.

Heavy Lift

High hydraulic pressure (Heavy Lift) means greater lifting power, at close radius, allowing for smooth and steady operation while moving heavy objects.

Swing Priority

Our exclusive system automatically and instantly delivers full swing power during combined operations. There's no need to switch modes to make quick work of jobs like side-digging and back-filling.

Greater Multi-function Capabilities

Adjustment for hydraulic flow

Divide ratio of hydraulic flow can be adjusted by service staff for custom usage.

SK75SR

Competent Performance

Our high-power engine complies with new STAGE V emission standards for SK75SR and SK85MSR. Compared to previous models, the engine output is significantly increased, which thereby shortens the digging cycle time remarkably. It attains high performances without reducing the speed even when heavy a load is applied or when travelling on a slope.

Model :YANMAR 4TNV98CT

Performance  Design

SK380SR_{LC}

Exceptional Performance

KOBELCO engines comply with Stage V Final emissions regulations

Hino engines are renowned for fuel efficiency and environmental performance, and KOBELCO has tuned them specifically for construction machinery.

The high-pressure common rail fuel injection system, the variable-geometry (VG) turbocharger, and the exhaust gas recirculation (EGR) system reduce particulate matter (PM) while the large EGR cooler greatly reduces the formation of Nitrogen Oxide (NOx) gases.

Model : HINO J08 EYD

Engine output

200 kW / 2,100 min⁻¹

(ISO 14396: without fan)

Short radius design occupies only one lane of highway

In addition to excellent lifting and digging performance, the SK380SRLC has adopted the attachment mode for a variety of tasks such as breaking and operates effectively even in narrow spaces as a single highway lane. Moreover, the cab permits operators to concentrate on work in a wide and comfortable space.

Independent Travel

Automatic Independent Travel dedicates one hydraulic pump to travel and one to the attachment on a continuous basis, allowing for a smooth and constant movement speed even while swinging or using the boom or attachment. With Independent Travel, safely carrying a large pipe across a job site is a breeze.

Heavy Lift

High hydraulic pressure (Heavy Lift) means greater lifting power, at close radius, allowing for smooth and steady operation while moving heavy objects.

DEMOLITION MACHINES

The Legacy of Kobelco:

- 1st place in Ultra High Reach Demolition Excavators in Japan, the world’s toughest demolition market.
- Kobelco innovative building demolition excavator technology is a result of experience using Kobelco’s core technology and it’s prior P&H and Yutani experience.
- 1955 tie up with P&H who had developed crane and attachment technology.
- 1977 introducing the World’s first building demolition machines using excavator technology and static hydraulic fracturing nibbler.
- Kobelco continues to move boundaries by continuously improving its technologies and incorporating customer feedback.

Power Meets Efficiency

In 2006, KOBELCO developed the world’s first hybrid machine full hydraulic excavator in the history of hydraulic excavators.

The SK210HLC-10, the latest model, is equipped with not only the hybrid technology developed and nurtured by KOBELCO but also a large-capacity lithium-ion battery for the first time in the industry. The technology of KOBELCO which knows hybrid machines well has enabled a compact but high-power assist, evolving its hybrid machines into “genuine hybrid machines” in terms of fuel efficiency and productivity. To the new stage. The hybrid machines of KOBELCO greatly exceed the hybrid standards that KOBELCO has established.

New Hybrid System

KOBELCO’s original hybrid system has further evolved. The newly adopted swing electric motor provides operability unique to a hybrid machine. Furthermore, the large generator motor driven by the large-capacity lithium-ion battery constantly assists the engine, greatly reducing the engine load. The new hybrid system effectively supports fuel efficiency and power for swinging, digging, and traveling, thus realizing a workload which far exceeds that of conventional machines.

Model		SK210HLC
Bucket Capacity	m ³	0.8
Engine Power (ISO 14396)	kW/min ⁻¹	124/2,000
Operating Weight	kg	22,100

Arm Crowding Force (Power Boost)	kN	102 (112)
Overall Length	mm	9,600
Overall Width	mm	2,990
Overall Height	mm	3,060

KOMEXS is a web-based programme that enables you to monitor your Kobelco machine remotely.

Direct Access to Operational Status

Location Data

Accurate location data can be obtained even from sites where communications are difficult.

Operating Hours

A comparison of operating times of machines at multiple locations shows which locations are busier and more profitability.

Operating hours on site can be accurately recorded, for running time calculations needed for rental machines, etc.

Fuel Consumption Data

Data on fuel consumption and idling times can be used to indicate improvements in fuel consumption.

Graph of Work Content

The graph shows how working hours are divided among different operating categories, including digging, idling, traveling, and optional operations (N&B).

Graph of Machine Duty Cycles

Security System

Engine Start Alarm

The system can be set an alarm if the machine is operated outside designated hours.

Area Alarm

It can also be set so that an alarm if the machine is moved out of its designated area to another location.

Maintenance Data and Warning Alerts

Machine Maintenance Data

Provides maintenance status of separate machines operating at multiple sites.

Maintenance data is also relayed to KOBELCO service personnel, for more efficient planning of periodic servicing.

SR SERIES MINI

Compact Yet Tough Mini

Mini excavators are the machines of choice for small jobs where space is limited. In addition to minimized tail swing radius, their excellent toughness and maneuverability have greatly broadened their usefulness. Now with upgraded hydraulic technology, KOBELCO has packed even more digging power into the SR series minis, for unprecedented performance in all types of operation. Innovation never stops: the new dozer blade shape makes dozing much more efficient. But that's not all. Our engineers have kept the environment in mind, too, ensuring that SR machines clear all the latest emissions standards. KOBELCO minis deliver more performance packed into less space than ever before.

New Dozer-Blade Shape

KOBELCO's unique blade design solves this problem by forming the earth into an arc that always falls forward. Because this prevents earth from falling behind the blade, only "one pass" is needed. (Patent pending)

iNDr Cooling System:

SK28SR, SK30SR, SK35SR, SK50SRX, SK58SRX

The highly airtight engine compartment and the offset duct contribute to noise reduction. The iNDr filter fitted in front of the cooling system ensures easy cleaning. The iNDr system on the SR Series mini excavators features air intake at the front of the machine and air exhaust underneath. It functions in the same way as the iNDr System on the SR series machines.

CONVENTIONAL SERIES MINI

Full-sized Job With A Compact Machine

Mini Excavators are being used more frequently in confined spaces such as residential areas and buildings. But smallness alone isn't enough to satisfy users, who are also demanding greater stability and tip-top operating performance.

The KOBELCO SK Series mini excavators answer this need with a high-output engine that provides plenty of power for tough, efficient operations. These machines also deliver excellent stability, and make the operator's life a whole lot easier with a well-designed, comfortable cab. In short, the SK Series mini excavators are ideal machines for those who want powerful, basic functions and durable reliability.

When you need to do a full-sized job with a compact machine, SK Series mini excavators are your answer.

Comfortable Cab

The plenty legroom allows the operator to work comfortably for long hours.

The control lever, wrist rests, travel lever and control panel are all positioned for maximum ease of use and operator comfort.
